

Questions for the Car! – Monday

Today focused on Adaptations! Different characteristics and behaviors that help animals survive.

We met either a goat or a pig.

They each have special adaptations that help them to survive.

Ask your Camper – What adaptations do they have to move around? What adaptations do they have to eat or find their foods.

We saw the Tigers and talked about disruptive camouflage.

This is where the animal is not colored to blend in but to disrupt or change their body shape to blend into the shadows around it.

Ask your camper – what are other animals that use disruptive camouflage (Zebra). Any other animals you met today use camouflage?

We will be completing some fun experiments this week like an Egg Drop activity as well as cooking smores in the sun!
